The invention concerns an arrangement, and a method for sharing communication resources among two or more operators, and solves the problem of providing a high utilisation of resources, while providing a fair allocation of resources between different operators.

Document cited in the International Search Report:

D1: EP 1220557 A1

The cited document represents the general state of the art.

The invention defined in claims 1-21 is not disclosed by this document.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed method of or arrangement for managing resources in a communication system by way of evaluating two threshold values as is suggested in the independent claims 1 and 19.

Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-19 is novel and is considered to involve an inventive step. The invention is industrially applicable.
